Projects

Air Quality Detection Using Land Coverage

My Roll: Front-end.

Air pollution is one of the most dangerous problems in the world, as it badly affects human health, animal health, and the environmental system. Air pollution is one of the most considerable environmental health risks in India today. The quality of the air in all areas is the most important factor that directly influences the incidence of diseases and decreases the quality of life.

In this project, we present an approach for cost-effective measurement of relevant environmental parameters, based on a Land coverage analysis—these applications are used to test local ecological air quality.
